

Life at university

My name is Phal Him. 23 years old. From Ratanakiri province. I am studying at Passerelles Numériques Cambodia (PNC). I am a student in 2024. A few points I want to share when studying at a university. There are consequences, relationships, commitment, and achievements. Firstly, I do not know English, so I am slow to study because many subjects have the English language which is the consequence for me. Secondly, relationships I find it easy to live with many people that I never knew and I know the people good and bad. I can build good relationships with a new friend. My friends know each other's passions and we the solidarity in our lives. Thirdly, my commitment is to study and succeed in web development and be able to work for companies. Because I have rules for myself, in the future I want to have a small company. And I think I can do it, so I will try to study starting at PNC. Fourthly, my achievements in English I can speak, listen, and write although a little but I can do it. Web development I know the language front-end (HTML, CSS, UX/UI, JavaScript) and back-end(NODE, PHP, DATABASE, PYTHON). I know a little about the back end, but I can do something. Finally, consequences, relationships, commitment, and achievements, I can overcome and to do on 40%. I think I can do 100% of the future.
